Planet AI launches IDA 5.3: Unlocking actionable insights from unstructured documents

Rostock, March 27, 2025 – Planet AI, a pioneer in using AI for document-based business processes, announces the release of IDA 5.3. IDA is a market-leading document processing platform designed to transform how organizations analyze and utilize their documents. The latest version leverages large language models (LLMs) to extract actionable insights from unstructured documents, enhancing information retrieval in contexts such as legal discovery processes.

IDA 5.3 introduces the LLM-based “IDA Understanding” module, which eliminates the need for manual screening of large document batches – a traditionally time-consuming, cumbersome task. “IDA Understanding is especially useful when information is not explicitly stated in the document and needs to be inferred from context”, explains Jesper Kleinjohann, CEO of Planet AI “Unlike a chat application, these insights are produced through mass processing and can be integrated into subsequent processes, such as enterprise content management.”. IDA Understanding automatically executes a list of recurring prompts, writing answers in the documents’ metadata. These prompts can include summaries of an entire record or the identification of references to illegal artifacts.

With the new release, Planet AI introduces an LLM-based specialized invoice module. Being layout-agnostic, customers won’t need to train several extraction modules. A fine-tuned LLM reduces the necessary hardware requirements, benefitting smaller and medium-sized customers. They will also appreciate a redesigned desktop client for batch processing, offering new features such as hot folder monitoring and thus lowering initial hurdles.

Press Release

The further development of IDA demonstrates Planet AI's ongoing dedication to supporting customers in overcoming digitization challenges, making knowledge accessible and addressing the shortage of skilled workers.

About Planet AI

As a software manufacturer, Planet AI specializes in the automation of document-based business processes. The IDA platform utilizes state-of-the-art AI technologies to transform unstructured information into actionable insights. This enhances the efficiency, speed, and quality of business processes, addressing challenges such as digitalization and the shortage of skilled workers. Planet AI collaborates with other software providers, BPO companies, and system integrators to offer competitive advantages and scalable solutions tailored to diverse business needs. Since its founding in 1992, and now a key component of Bechtle's technology portfolio, Planet AI is recognized as a pioneer in using AI for document-based business processes.
