

AI that knows your business processes

JAIDE is your AI assistant built for complex knowledge work. Unlike generic chat tools, JAIDE works with your organization's own knowledge – workflows and models configured for each business process, trained on your terminology, your industry, your operations. Built and hosted in Germany, JAIDE gives you full data sovereignty and no dependency on US cloud providers. Your data stays where it belongs.

Your productivity bottleneck hiding in plain sight

Your organization's knowledge is everywhere and nowhere. It's in manuals, tenders, service reports, and case files. But it's scattered across systems that don't talk to each other, locked in formats that generic AI tools can't reliably read. Most organizations don't have a knowledge problem. They have an access problem.

The brutal math:

82% of organizations struggle with siloed data across disconnected systems. The cost? Your knowledge workers waste up to **40% of their time** searching instead of creating value. That's nearly two full days per week, per employee.

Why current AI tools fall short:

First-generation AI promised to fix this. Instead, they created new problems:

- Most are a **generic language model** with a user interface in front of it.
- They pull from **flawed OCR output** or unstructured PDFs and return unreliable answers.
- **Siloed solutions** can't access your integrated business systems, leaving critical knowledge trapped.

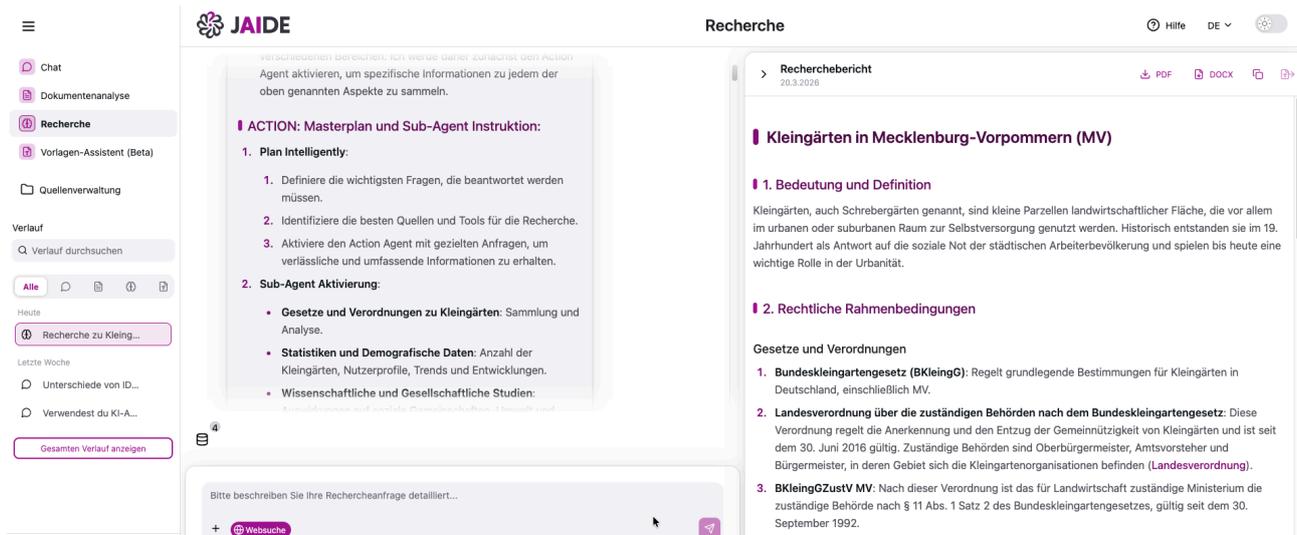

What sets JAIDE apart?

- **More than an LLM wrapper:** For each business process, JAIDE configures specialized workflows and models. The system automatically selects the right model for each task.

PRODUCT BRIEF JAIDE

- **Built with you:** Generic models don't know your terminology or your workflows. JAIDE is developed alongside your team — from process analysis through go-live. We train models on your industry and organizational knowledge and keep improving them as your business evolves.
- **Every answer is traceable:** JAIDE uses the same recognition technology as IDA to produce structured data from scanned PDFs, handwritten documents, and complex tables. Every response includes source references and highlights in the original document.

How it works

Intelligent research

- ▶ Search across internal and external knowledge sources
- ▶ Orchestrated by specialized AI agents
- ▶ Consolidated results with source references

Document analysis

- ▶ Automatic summaries and tables of contents
- ▶ Precision data extraction with visual document highlighting

Template assistant

- ▶ Populate predefined document templates
- ▶ Pull content from any JAIDE function (chat, research, document analysis)
- ▶ Export as Word or PDF

Chat

- ▶ Interaction with a document
- ▶ Instant answers with source references
- ▶ Preview of relevant text passages

Your benefits at a glance

▶ Full data sovereignty

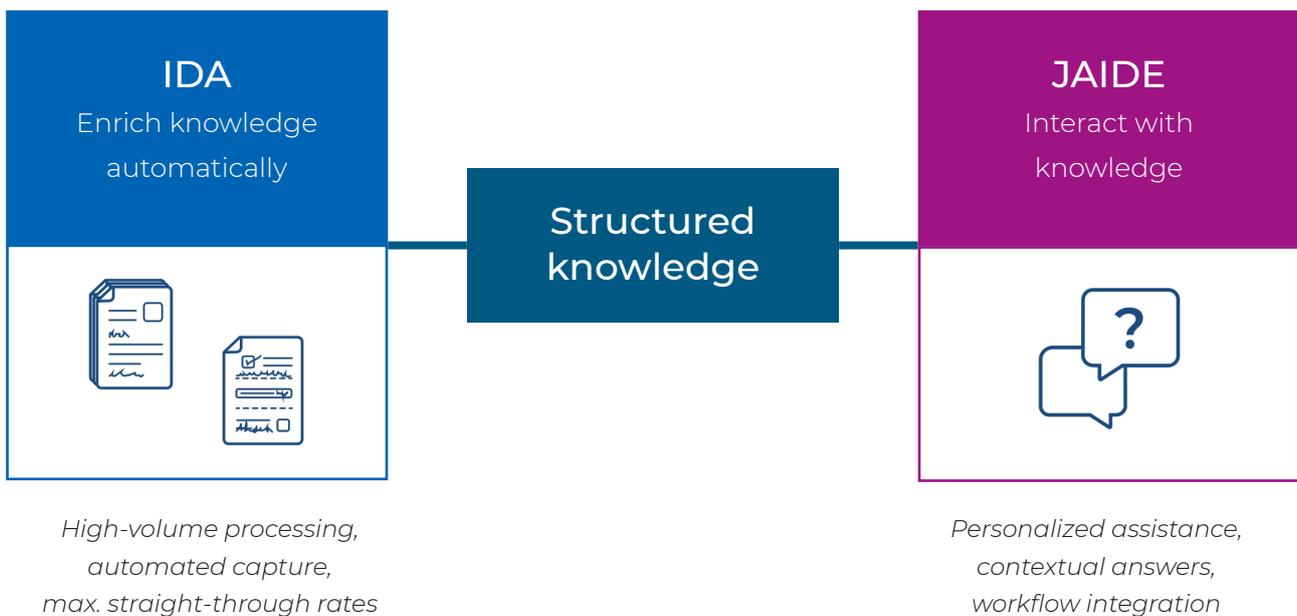

Your sensitive data never leaves your chosen environment: private cloud, on-premises, or hybrid deployment.

Your benefits at a glance

- ▶ **Full data sovereignty**
Choose your environment: private cloud, on-premises, or hybrid deployment.
- ▶ **Built-in domain expertise**
Co-creation and fine-tuning make JAIDE a specialist in your industry and your processes.
- ▶ **Reliable data from the ground up**
Clean, structured input powered by market-leading OCR accuracy from IDA.
- ▶ **Continuous improvement**
JAIDE evolves with your organization – no one-time deployment.
- ▶ **No vendor lock-in**
New AI models can be integrated without switching systems or rebuilding workflows.
- ▶ **Granular access control**
Define which teams can use which AI functions and which data sources they can access.

JAIDE and IDA – the complete solution

While **IDA** converts your document volumes into structured data at scale, **JAIDE** makes that knowledge instantly accessible to every user:

JAIDE works with any document source, but it truly reaches its full potential when used in combination with IDA.

Results across industries

JAIDE as a service assistant at Maschinenfabrik Niehoff

- ▶ Challenge: Service reports in multiple languages and technical manuals running over 1,000 pages with no searchable structure.
- ▶ Today, field technicians and headquarters staff have instant access to the full body of service knowledge.
- ▶ Automated translation enables seamless collaboration across locations.

JAIDE in tender management at Bechtle

- ▶ Challenge: Manual extraction of critical information from tenders running up to 600 pages, with no access to knowledge from past bids.
- ▶ Today, standard information is automatically extracted with over 90% accuracy, with source previews for fast validation.
- ▶ Teams can query current and historical tender documents directly via the chat interface.

Stop searching, start succeeding.

Every minute your team spends searching is a minute not spent creating value for your customers.

PLANET AI pioneers automation for document-driven business processes using German AI technology. Its core solutions include IDA for high-precision document capture and JAIDE, an AI assistant. Together, they ensure end-to-end data quality from initial capture through decision-making. Since 2023, PLANET AI has been part of Bechtle AG's portfolio and serves scanning service providers, software manufacturers, and document-intensive industries ranging from insurance and banking to public administration. The solutions combine modular architecture and flexible deployment models with strict adherence to European data protection standards. Founded in Rostock in 2015, PLANET AI employs around 60 professionals.
